Resistance

Number of Individuals vs Iteration

Legend: Cooperator, Defector

Invasion

Number of Individuals vs Iteration

Legend: Cooperator, Defector

Player Opponent States

$(C, C, 1) \longrightarrow$ [D] or [C] and $s \in \{1, 2, 3, 4\}$ (next state)

```python
import axelrod_dojo
```
TF1 #1	TF1 #2
1: C	**1: C**
8: C	**8: C**
5: D	**5: D**
4: C	4: C
4: C	4: C
4: C	4: C
4: C	4: C
4: C	4: C

"Don't trust anyone."

Press and Dyson 2012: "Iterated Prisoners Dilemma contains strategies that dominate any evolutionary opponent"

"The world of game theory is currently on fire."

MIT Technology Review, 2012
If

$$\tilde{p} = \alpha S_x + \beta S_y + \gamma \tag{1}$$

then:

$$\alpha S_X + \beta S_Y + \gamma = 0 \tag{2}$$

Specifically:

$$S_X = -\frac{\beta}{\alpha} S_Y = \chi S_y \tag{3}$$

"Extortion cannot be beaten."

$$\tilde{p}_1 = \alpha R + \beta R - P(\alpha + \beta) \tag{4}$$

$$\tilde{p}_2 = \alpha S + \beta T - P(\alpha + \beta) \tag{5}$$

$$\tilde{p}_3 = \alpha T + \beta S - P(\alpha + \beta) \tag{6}$$

$$\tilde{p}_4 = \alpha P + \beta P - P(\alpha + \beta) = 0 \tag{7}$$

with:

$$\chi = \frac{\tilde{p}_2(P - T) + \tilde{p}_3(S - P)}{\tilde{p}_2(P - S) + \tilde{p}_3(T - P)} \tag{8}$$

$$Cx = \tilde{p} \qquad (9)$$

$$C = \begin{bmatrix} R - P & R - P \\ S - P & T - P \\ T - P & S - P \\ 0 & 0 \end{bmatrix} \qquad (10)$$

$$x^* = \text{argmin}_{x \in \mathbb{R}^2} \| Cx - p^* \|_2^2 \qquad (11)$$

$$\text{SSE} = p^{*T} p^* - p^* C \left(C^T C \right)^{-1} C^T p^* = p^{*T} p^* - p^* C x^* \qquad (12)$$

>
> And I really wanted to thank you all, I discovered your project because of a course where we needed to participate in an open source project, and I had the occasion to compare the welcome me and my coworkers received here compared to other people from my class who worked on different project. And I've got to said you are awesome on that part and on the help your provide to newbies I like your project so I'll try to continue to contribute now and then !
